Access Requests and Account Register (HPMG, practice document)

Nov 4, 2026 · @Musah

This record holds the approved access requests for DC01 and, once the accounts exist, the account register required by HPMG-POL-AC-001 section 9. HPMG and every person named here are fictional. It supports POAM-007 (AC-6) and POAM-002 (AC-2) and was created on 2026-11-04, after the DC01 assessment, as remediation.

1. Access requests

Request	Requester (manager)	Account requested	Business reason	Manager approval	System Owner approval	ISO review
REQ-0001	Priya Raman, Director of IT	mbell: standard account for Marcus Bell, System Administrator, for daily work such as email and tickets. No administrator groups.	Separate daily work from privileged work (policy rule 4).	Priya Raman, 2026-11-04	Priya Raman, 2026-11-04	Daniel Okafor, 2026-11-04
REQ-0002	Priya Raman, Director of IT	adm.mbell: named administrator account for Marcus Bell, member of Domain Admins and Administrators only. Used only for privileged tasks. No email or web browsing.	Replace shared use of the built-in Administrator with a named, traceable account (policy rules 2 and 4).	Priya Raman, 2026-11-04	Priya Raman, 2026-11-04	Daniel Okafor, 2026-11-04

The Director of IT is both the manager and the System Owner, so one person gave both approvals. To keep a second person involved, the ISO reviews each request for privileged access before the account is created and checks the membership every month (policy section 9.3).

2. Account register

The register is added after the accounts are created, with the creation date and ticket number for each, as policy section 9.2 step 4 requires.
