Weekly Log Review Record, DC01 (HPMG, practice document)

Nov 6, 2026 · @Musah

The ISO reviewed the DC01 Security log for account activity as HPMG-POL-AU-001 section 7.3 requires. All 26 events in the period match a request, an assessment test or an expected change, except for two deviations recorded below. HPMG and every person named are fictional, and this record was created after the DC01 assessment as remediation (POAM-002 and POAM-009).

1. Review details

Item	Value
Review date	2026-11-06
Reviewer	Daniel Okafor, Information Security Officer (fictional)
Period reviewed	2026-10-30 to 2026-11-06 (7 days)
System	DC01, domain ad.northstar.test
Evidence reviewed	Security log export EV-0047; account register EV-0046; access requests EV-0038
Event types covered	Account created, enabled, disabled, deleted, password reset, group member added, account locked out
Next review	2026-11-13

2. Results

Time (DC01)	Events	Account or group	Explained by	Result
2026-10-31 9:48 PM	Disabled	svc_nessus	Service account disabled before the assessment. Matches the register.	Expected
2026-11-02 7:43 AM to 6:26 PM	Created, password set, enabled, added to Remote Desktop Users, deleted	jdoe	Assessment test account for AC-7, removed the same day.	Deviation 1
2026-11-04 8:09 AM to 5:53 PM	Created, password set, enabled, locked out, deleted	lockout.test	Temporary account for the AC-7 retest (EV-0037), removed the same day. The lockout is the intended result of the test.	Deviation 1
2026-11-04 7:39 PM to 7:49 PM	Created, deleted, created again	mbell	Failed first attempts to create the account (password rejected by complexity rules), then created correctly under REQ-0001.	Expected
2026-11-04 7:42 PM	Created, password set, enabled	adm.mbell	REQ-0002.	Expected
2026-11-04 7:42 PM	Added to Domain Admins and Administrators	adm.mbell	REQ-0002 approved privileged membership.	Expected

Time (DC01)	Events	Account or group	Explained by	Result
2026-11-04 8:13 PM	Disabled	Administrator	Planned change to AC-6 remediation (POAM-007), performed by adm.mbell.	Expected

Events not explained by a request or a documented change: none.

3. Findings and actions

ID	Finding	Action	Owner	Due
1	Test accounts jdoe and lockout.test were created without an access request, and jdoe was added to Remote Desktop Users. Both predate the approved policy and were deleted the same day.	Test accounts need an approved request like any other account. Add this to the next policy review.	ISO	2026-12-05
2	Until 8:13 PM on 2026-11-04, every change was made by the built-in Administrator, so the log names no person.	Closed by POAM-007. Changes now show named accounts. Confirm on the next review.	ISO	2026-11-13
3	This query did not include group removals (events 4729, 4733, 4757), so removing the Administrator from Enterprise Admins and Schema Admins is not visible here.	Add those event types to the weekly query.	ISO	2026-11-13

4. Conclusion

Account activity on DC01 is logged with the account name and the person who performed each action, and the ISO reviewed it. This shows that the use of accounts is monitored, which supports AC-02g, and that audit events are reviewed on a defined cycle, which supports AU-2. The record was prepared after the DC01 assessment and was not in place during it. The reviewer and all persons named are fictional.
