Interview Notes: AU-02b, Coordination of Event Logging

Practice exercise. Harbor Point Medical Group (HPMG) and all people named are fictional. The assessor also played the interviewee.

Date of interview: 2026-11-06 **Assessor:** Musah Issah **Interviewee:** Information Security Officer (ISO), HPMG (fictional) **System:** DC01, domain controller (ad.northstar.test) **Objective:** AU-02b. Coordinate the event logging function with other organizational entities requiring audit-related information to guide and inform the selection criteria for events to be logged. **Method:** Interview

Questions and answers

1. **Who at HPMG needs audit-related information from DC01?** The Compliance team.
2. **Before the audit policy was written, did you talk to anyone about which events should be logged? Who, when, how?** Compliance team, management and the system administrator, through interviews on 2026-11-04.
3. **What did each group ask for?** What information is needed and the scope.
4. **How did those requests reach the policy's event list? How was coordination carried out?** Through email and a Teams meeting.
5. **Is there any record of this coordination?** No.
6. **How often will the event list be reviewed with these groups?** Yearly.

Assessor observations

- Coordination is described as having happened on 2026-11-04, the same day the Audit and Accountability policy was approved (EV-0034). The assessment found no policy on 2026-11-03.
- Only the Compliance team is named as needing audit information, yet three groups were consulted.
- The requests are described in general terms (information needed, scope). No specific request is tied to an event type in the policy event list.
- No record of the email or meeting exists, so the answers cannot be corroborated.
- A yearly review is defined.

Result for AU-02b

Not Met (retest, 2026-11-06). Coordination is claimed, but it is not documented and no request can be traced to the event list. Interview alone is not enough to show it guided the selection of events.

Recommended fix: the ISO creates a short coordination record listing each group consulted, what each asked for, and which policy event types (section 7) respond to each request, then retest.
